Risk Mitigation Program

Health Choice Arizona has collaborated with axialHealthcare to offer a wide range of tools and resources to providers that aim to support the health and safety of patients on opioids and other controlled substances.

➤ **Through this collaboration, the tools available to providers include:**

- Patient intelligence highlighting patients who fall into certain risk categories, such as patients recommended for evaluation for substance use disorder, opioids received from multiple providers, or benzodiazepine use with opioids. Risk categories are tied to clinical considerations that may help mitigate the risk;
- Patient-specific snapshots of key clinical information that summarize critical diagnoses and recent prescriptions;
- An interactive opioid reduction tool to assess patient readiness and motivation and support the development of patient-centric reduction plans when beneficial;
- Insight into areas of patient risk within a set of clinical measures for opioid prescribing.

➤ **Direct Provider Support**

These resources are supported by our Clinical Consult Services (CCS) team of clinical pharmacists, nurse practitioners, and engagement specialists. The CCS team's goal is to support you in the treatment of complex patients by applying their clinical expertise, offering detailed patient intelligence, and identifying care coordination opportunities and other relevant evidence-based solutions to support optimal patient health outcomes.
